Certified Ethical Hacker

The Certified Ethical Hacker program is an accredited course focused on combating the latest security threats. Instruction will be provided in the most advanced hacking tools and techniques used by security professionals and hackers alike.

Computer Hacking Forensic Investigator

The Computer Hacking Forensic Investigator program takes a methodical approach to covering major forensic investigation scenarios. Students receive vital hands-on experience with the tools and techniques required to carry out a computer forensic investigation.

Certified Security Analyst

The Certified Security Analyst program explores the analytical phase of ethical hacking while focusing on how to identify and mitigate security risks to infrastructure. The program provides training on how to analyze the results of vulnerability assessments.

New Online Certifications Available

There is an ever-increasing need for skilled professionals in the information security field. We are pleased to announce that University of Detroit Mercy will be offering three new online certifications for class credit and non-credit.

The EC-Council (International Council of Electronic Commerce Consultants) is a professional certification body known for its information security courses. Their certifications have received endorsements from numerous government agencies such as the National Security Agency and the Committee on National Security Systems.

Through our partnership, UDM students have a choice of three courses, including the world-renowned Certified Ethical Hacker program. These iLearn self-paced packages include the Exam, iLabs, and E-Courseware at a discounted price of $1,599 through University of Detroit Mercy.

To receive UDM class credit, students must also register for an independent study with Dr. Dan Shoemaker, Director of the Information Assurance/Cyber Security Program. Tuition will be assessed at the standard rate for a three-credit independent study course in addition to the EC-Council course fees.
